

microfilter

Successful with Microfilter.

Mf Microfilter is a manufacturer of filtration solutions for liquid and gaseous media. We develop and produce custom filter housings and elements with long service life, optimal flow characteristics, and minimal weight for motorsports. Our solutions are used, for example, as fuel filters, hydraulic filters, transmission oil filters, or air filters.

Since 1973, we have been developing filters and filter elements for almost all industries. From the filtration of liquids to gaseous media, from single pieces and small batches to series production – we are your expert. The entire value chain for your filter product is located 100% in-house.
